

Contents

Executive Summary	1
1. Introduction	2
1.1 Study objective	2
1.2 Purpose of this report	2
1.3 Background to this Study	2
2. Corridor Selection Process	7
2.1 Overview	7
2.2 Multi criteria analysis	8
2.3 Data sources	8
2.4 Performance criteria	10
2.5 Criteria weightings	11
2.6 Modelling result	12
3. River Crossing Options	18
4. Alignment Design	19
4.1 Design approach	19
4.2 Design parameters	19
4.3 Refinements of the model outcome	19
4.4 Horizontal alignment	20
4.5 Vertical alignment	20
4.6 Impacts on existing infrastructure	20
4.7 Hydrology	21
4.8 Other Key issues	22
4.9 Conclusion	22
5. Impact Assessment	23
5.1 Environmental Impact Assessment (IAR)	23
5.2 Community Consultation	23
5.3 Traffic and Transport Infrastructure Impact Assessment	23
6. Order of Cost for Required Infrastructure	25
7. Conclusions	27

Table Index

Table 1	Performance rating descriptions	10
Table 2	Example Ratings – Remnant Vegetation	10
Table 3	Example Ratings - Flooding	11
Table 4	Final Established Alignment Geometries	20
Table 5	Order of Cost Estimate	25
Table 6	Order of Cost Estimate	26

Figure Index

Figure 1	Locality Map	4
Figure 2	Suitability Map	13
Figure 3	Suitability Map with Model Outcome	14
Figure 4	Suitability Map with Draft Corridor	16
Figure 5	Rail Corridor	17
Figure 6	Potential locations for local cross drainage infrastructure	21

Appendices

- A Performance Criteria Rating
- B Corridor Analysis Criteria Weighting
- C Individual Constraints and Opportunity Maps
- D Preliminary Alignment Design
- E Environmental Terms of Reference
- F Traffic and Transport Infrastructure Impact Assessment
- G Order of Cost Estimates
- H Economic Assessment Reports
